

ABSTRACT OF THE INVENTION

A system for use with electric equipment includes a first input/output (I/O) device configured to couple to the electric equipment, a monitor coupled to the first I/O device and configured to determine information regarding the electric equipment, a second I/O
5 device configured to communicate with a communication network, a memory that stores a computer-executable program configured to be executed by a computer to provide a computer interface for providing indicia of the information regarding the electric equipment, the computer interface being in a format that is distinct from a network browser format, and an interface-provisioning device configured to convey the computer-
10 executable program toward the computer via the second input/output device and the communication network.
